

Revolutionary news in Europe within wood protection

First effective and environmentally friendly protection method within wood protections

Ab WSJ Sanitation Oy has through many years development work taken forward an entirely new method in order to protect timber and other wood based products. The protection covers: mould-, rot-, wood blue stain fungi- and termite protection. The protection is poison- and odourfree protection method that is safe and safe to use through the entire process from raw material to end use. Timber and other building materials can be protected on an entire unique way in order to receive a very high quality. In that way everything from the start of the building process to the end use of for example residential building.

The company is long well-known for its unique method for mould treatment of real estate's. Biological-treatment without tearing up constructions or without needing to stop the activity and save resources and money.

The most effective wood protection system presented so far in Europe

WSJ-method is unique and very effective for all well-known wood kinds. The combination of fire - and ecological protection does that there are no one else that can offer this kind of service. The method will lead to that the wood production, the durability and the security increases and it is not a burden for the environment.

The new wood protection functions efficiently entirely without poisons

Ab WSJ Expert Services Oy has developed an entire unique environmentally adapted wood protection. The Liquid is one fully poison-free, long term and protects all wood kinds against rot, mould, wood blue stain fungi and attacks of harmful insects as for example termites. Apart from the wood protection, one can also fire protect all well-known wood kinds to fire class B-s1, d0 and within shipping IMO - PART 5.

The protection can be used both indoors and outdoors, contains no chemical that can influence people's health. This is an environmental sustainable future for wood building. The protection liquid applied with the WSJ method is M1 tested.

An unique method with entire fantastic liquids

With more than 10 years' experience we know today that this method will win big successes within the entire construction industry. It gives economic advantages, safer building and more healthy living. Adapted to environmental demands and safe to use because it is poison-free in all situations from production to the end use. No hazardous waste arises in any stage.

An unique solution for the environment and all timber! All construction components can be protected also concrete constructions.

The protection can be used in treatment of all wood surfaces, construction boards, insulation materials and so on.

The protection is applied in the production process in order to achieve the best possible efficiency and by doing that for example after a plane that copes with more than 800meter per minute! No extra moving of the timber is necessary.

Effective fire protection

With fire class B-s1, d0 one gets fire safer wood houses and with the" built-in" biological protections a fresh timber that copes with attacks that the moisture and the nature can cause.

EFW = Environmentally Friendly Wood

An entire new wood protection program that exceeds all well-known classifications. Now, wood building can get help with coping with the loud that the climate changes caused.

Treated timber tolerates a moisture quota on 95% and nevertheless no biological attacks. This gives more healthy houses and savings when renovations and sanitizing is not needed. For example a water leak: the area needs only to be dried up because on treated materials can no microorganisms get a foothold! This gives extremely big economic advantages.

The method has been tested

Treated timber and construction panels have undergone several independent tests implemented in Sweden and Finland with best possible results.

COLOURS

At the treatment point one can use color to dye construction boards and wood to desired nuance

Some of the companies using the timber protection in Finland

Koskisen Oy and AB SKOGEN

Ab WSJ Expert Services Oy shortly will also initiate cooperation with companies in Europe. To this we will return as soon as possible.
